

## Daily Code Practice

1. What is the output of the following expression?

```
def combo_expr_01():  
    return 4 * 7 - 6
```

2. Write an expression that calculates the result of subtracting 5 from 23.

```
Sample Output:  
expression523() -> 18
```

**ANSWER HERE:**

```
def expression523():  
    return
```

3. What is the output of the following expression?

```
def combo_expr_01():  
    return 4 + 3 * 5
```

4. Write an expression that calculates the result of 2 multiplied by the sum of 6 and 3.

```
Sample Output:  
expression263() -> 18
```

**ANSWER HERE:**

```
def expression263():  
    return
```
